

KOREDE UMAR AFOLAMI

Dallas, TX | (682) 374-5260 | afolamikorede@gmail.com | linkedin.com/in/korede-afolami-/ | github.com/the1umar

EDUCATION

Texas Tech University

Bachelor of Science: Major: Computer Science, Minor: Mathematics

Lubbock, TX

Expected Graduation: December 2026

- **GPA: 3.9**

- Relevant Courses: Data Structures & Algorithms, Compilers, Discrete Math, Computer Architecture, Database Systems, Networking

AREAS OF EXPERTISE

Programming Languages and Libraries: Python, Java, GoLang, JavaScript, C, C++, SQL

Tools and Frameworks: AWS, Node.js, React, Node.js, Next.js, Prisma, Terraform, FastAPI, Spring Boot, Git, Docker, Kubernetes

WORK EXPERIENCE

Cisco

Software Engineer Intern

Boulder, CO

May 2026 – August 2026

- Authored a technical RFC and system design for a greenfield, cell-based backend service in Go that re-implements the admin API of a legacy Splunk Cloud platform, defining its per-cell deployment model, request routing, Istio-based network policies, and service-account authentication strategy.
- Onboarded the service to an internal Kubernetes + GitOps platform using infrastructure-as-code (Vault policies, namespaces, deploy keys) and Backstage scaffolding, standing up a passing CI/CD pipeline with automated ArgoCD deployments to a live cloud dev environment.
- Validated the full suite of backend admin operations against a live service instance via Kubernetes port-forwarding, documenting API-contract deltas between the legacy and cell-native implementations.
- Replaced Okta/OAuth downstream authentication with Vault-provisioned service-account tokens and validated integrations across 3 internal microservice clients, removing a hard dependency on credential-based token exchange.

Splunk

Software Engineer Intern

Boulder, CO

May 2025 – August 2025

- Built, containerized and deployed a Python-based serverless backend with AWS, Terraform and PostgreSQL via Prisma ORM that visualized 5000+ GitLab CI/CD pipeline executions weekly, including upstream/downstream relationships, reducing debugging cycle times from hours to minutes.
- Integrated GitLab GraphQL+ REST APIs to aggregate job-level metrics, reducing manual investigation time for failed releases by 100% and accelerating readiness checks by ~30%.
- Automated Slack alerts for 200+ stakeholders (release engineers, PMs, CINCs), enabling real-time visibility into release health, reducing incident response lag by ~40%.

Texas Tech University Computer Science Department

Teaching Assistant (TA)

Lubbock, TX

January 2025 – Present

- Supported 190+ students in Data Structures and Discrete Math by grading and providing feedback increasing student performance by ~15%

PROJECTS

CampusPlay – Pickup Sports Finder

January 2026 - Present

- Developing a full stack platform for university students to create, join, and discover pickup sports games using PostgreSQL (Prisma ORM), and Node.js + TypeScript with Tailwind CSS.
- Integrating Google Maps API for GPS-based game discovery, JWT authentication with @university.edu domain verification, and Firebase Cloud Messaging for real-time notifications.
- Deploying as a containerized serverless AWS application, reducing infrastructure overhead by ~40% vs. traditional hosting.

Layered Full-Stack Application using Spring Boot, JPA, and React

January 2026

- Built a full-stack web application using Java, Spring Boot, Spring Data JPA, Hibernate, PostgreSQL, and React, designing RESTful APIs and integrating them with a modern frontend for end-to-end data flow.
- Implemented backend business logic with layered architecture (controller, service, repository), handling CRUD operations, request validation, exception handling, and database persistence using JPA/Hibernate.
- Developed and connected a React (JavaScript) frontend to the Spring Boot API using Axios, managing state and component lifecycle while ensuring clean API contracts and scalable system design.

Umar's RAG AI ChatBot

May 2025

- Developed a Python-based Retrieval Augmented Generation Chatbot that processed contextual queries with <1s response time on test sets of 500+ prompts.
- Integrated LangChain pipelines with llama 3.1-70b, backed by vector storage in ChromaDB for efficient semantic retrieval.
- Delivered an interactive Streamlit UI for student users, enabling auto-grading/QA tasks and improving grading workflow efficiency by ~25%.

LEADERSHIP AND COMMUNITY

ColorStack TTU

Vice President

Lubbock, TX

December 2024 - Present

- Directed a 14-member exec team, hosting company collaborations with Apple, Amazon, Dell, Datadog, Paycom, and FourJs, impacting 200+ member students.
